

DT420 Cordless Phone

Cordless voice, messaging and personal safety

The DT420 is designed for environments where personal safety is a major consideration. Incorporating a number of communication functions, it allows you to call for help wherever you happen to be. You can receive urgent information even when you are on the phone. And in a worst-case scenario, you can raise an alarm with a single touch.

The Ericsson DT420 combines the convenience of a cordless phone, the flexibility of a short message terminal and the security of a personal alarm in one rugged handset. With just one push of the red alarm button, a pre-set message is sent for help. The Ericsson DT420 is rugged and durable, with an IP54-classified plastic casing that withstands water spray, dust and soil.

Additional Functions include:

- Receives important messages of up to 128 alphanumeric characters.
- Stores the last 10 messages for quick reviewing.
- Callers can be identified on the display before you answer.

- Built-in personal phone book that holds up to 75 entries for quick dialling.
- One key dialling for the ten most frequently called numbers.
- Sturdy buttons and a clear LCD display.
- Stores personal settings on the SIM card, so they can be used on other cordless phones.

Like all Ericsson cordless phones, the DT420 delivers exceptional speech quality that is no different to a wired desk phone. Based on open DECT standards (CTM FP-2) it will keep pace as cordless technology evolves.

DT420 Cordless Phone

Get help instantly

Personal alarm button and optional no-movement alarm.
